Bahria College Karsaz

School & College

Biology | Pre-Engineering

Experience

Albiware LLC

Chicago - Remote

Full Stack Mobile Engineer

Sep 2025 - Present

- **Multi-Stack Engineering:** Developed and scaled high-impact features across mobile, backend, and web systems to drive the core Albi product ecosystem.
- **Accelerated Product Launch:** Spearheaded the development push to successfully launch the mobile application shortly after joining the team.
- **Advanced Mobile Features:** Engineered a suite of complex tools, including an **interactive room sketching** interface, a **LiDAR-powered** 3D room scanning module and **check scanning and deposit** workflow to streamline financial operations for users driving business value.
- **Cross-Functional Strategy:** Collaborated directly with **Product and Customer Support** teams to translate user feedback and pain points into technical improvements.
- **System Architecture & Scaling:** Architected and maintained scalable backend services while ensuring production stability through rigorous testing and documentation.
- **Engineering Mentorship:** Actively mentor other developers and new hires, providing technical guidance on best practices to accelerate their onboarding and professional growth.

Tech Hub

Karachi - Remote

Flutter Developer

Jul 2024 - Jun 2025

- **End-to-End Ownership:** Drove the full-cycle development of **Rezerve**, a large-scale application, from initial architecture to production release.
- **External Integrations:** Managed the seamless integration of third-party services and complex external APIs into the core application workflow.
- **Multi-App Management:** Simultaneously oversaw the maintenance and feature enhancement of multiple legacy applications.

Karachi - Hybrid

Junior Flutter Developer

Sep 2023 - Jul 2024

- **Full-Cycle Development:** Spearheaded the end-to-end implementation of multiple production-ready mobile applications, including **Primecar**, **Cookease** and **Silver Coin Calculator**.
- **Cross-Functional Collaboration:** Partnered closely with **UI/UX design**, **QA** and stakeholders to align technical delivery with product requirements and user needs.
- **Large-Scale Architecture:** Contributed to the development of complex, high-traffic applications.

Flutter Intern

- **Bug Resolution:** Proactively identified and resolved critical bugs within existing Flutter applications to ensure platform stability and high performance.
- **App Optimization:** Contributed to the ongoing maintenance of cross-platform apps, focusing on codebase scalability and improving the end-user experience

Projects

TrainerJOE | Upwork | Australia

Sep 2024 - May 2025

- **Multi-Platform Architecture:** Engineered a comprehensive fitness ecosystem comprising a React landing page and web app, a specialized Flutter for Web **presentation engine** and a .NET/MS SQL backend.
- **Custom Presentation Engine:** Developed a full-featured "Presentation Mode" with **real-time controls** for workout sequencing, pause/resume functionality, rest delays and automated slide transitions.
- **Workout Builder & Customization:** Implemented a granular workout constructor allowing instructors to customize branding, timings, exercise video integration and slide-specific configurations.
- **Administrative Suite:** Built an extensive **admin dashboard** featuring a video library management system and integrated **performance analytics** to track instructor and presentation usage.
- **Cloud Deployment:** Managed the end-to-end deployment and hosting of the entire microservices-based architecture on AWS.

Prints on Pendants | Upwork | USA

Jul 2024 - Jan 2025

- **Cross-Platform App:** Developed a mobile application for iOS and Android that allows users to securely store and manage images, handwriting and fingerprints.
- **Machine Learning Pipeline:** Built a **custom ML microservice** for automated document scanning and high-fidelity **fingerprint feature extraction** from raw images.
- **AWS Cloud Infrastructure:** Engineered a Node.js backend using AWS **microservices**, SQS queues and compute resources for scalable data processing.
- **Manufacturing Integration:** Designed a secure storage system for **biometric data** used in the custom physical jewelry manufacturing process.

WARRIOR Adventures | Upwork | USA

Feb 2023 - Sep 2024

- **Mobile Development:** Designed and developed the mobile application for iOS and Android using Flutter.
- **Real-Time Features:** Implemented live **location tracking, navigation, and interactive challenges** for team-based gameplay.
- **Backend Architecture:** Built Node.js backend services to manage **real-time leaderboards**, team coordination and game logic.

Clue by Candlelight | Upwork | Australia

Sep 2023 - Feb 2024

- **Full-Stack Development:** Engineered a comprehensive eCommerce platform for **eBook distribution** using React, Node.js and MongoDB.
- **Fintech Integration:** Developed a secure checkout workflow by integrating **PayPal** for automated payment processing and order fulfillment.
- **Custom CMS:** Built a proprietary **Admin Panel** to manage content uploads, user permissions and sales analytics.

Event Bazaar | Reference | Pakistan

Jun 2024 - Nov 2024

- **Mobile Development:** Developed an event marketplace for iOS and Android using the **Flutter** framework.
- **Location Services:** Integrated Google Maps API to enable real-time, location-driven event discovery and interactive map overlays.
- **End-to-End Delivery:** Managed the full product lifecycle, from initial architectural design to final production deployment.

- **Mobile Prototyping:** Developed a cross-platform Flutter prototype for a secure, AI-driven medical record storage system.
- **Document Scanning:** Integrated advanced **document scanning** with automated **edge detection** for high-fidelity record digitization.
- **Secure Workflows:** Implemented robust user authentication, secure file uploads, and interactive document preview modules.
